

Transition from ESNs to MEIDs Live Webcast

James Person • Bill Dahnke • David Crowe

CDMA Development Group

March 7, 2008

Executive Summary

- ESNs – and their equivalent for R-UIM based handsets (UIMIDs) – are soon to be exhausted
- Their replacements are MEIDs and EUIMIDs, which have a backwards compatible implementation
- ANSI-41 based networks – today primarily CDMA – need to transition to support MEID and EUIMID based devices now
- More information is available at www.cdg.org/meid
